

Problem: Which arene is aromatic and the most thermodynamically stable?

(A) cyclobutadiene (B) benzene (C) cyclooctatetraene (D) pentalene

Agent trajectory

Sentence	Find the aromatic, lowest-energy arene.	Test each option with Hückel's $4n+2$ rule.	Benzene (B): 6 π electrons, satisfies $4n+2$.	[python] compare $\Delta G(A-D)$ ↳ Obs: $\Delta G(B)$ lowest	A, C, D antiaromatic or non-planar → exclude.	$\boxed{B}$ (benzene)
